

# September Update – Beach United Church Garden

## Saturday Sept 17

### CLEARING A PATHWAY

The path to the solar panel electrical control box was completely overgrown, so one of last Saturday's tasks was to clear the way.

The result – pathway bordered by brown-eyed susans clearly indicates the route to take.

On the far right, a glimpse of the bright shiny foliage of sumac which will shortly produce its distinctive bright red fruits.

### VEGGIE GARDEN KEEPS PRODUCING

On the left what may be the last produce from the veggie garden – two cucumbers which were placed in the “free little pantry”, and picked up a short while later.

### MORE ON THE HOP TREE

Last month we reported how the Hop tree is thriving following its move. Sally has provided some more information about it:

It is a native Ontario plant which used to line the banks of Ontario's thousands of lakes, but is now an endangered species. The picture shows where damage occurred 2 years ago and how the tree is recovering.

## September Update – Beach United Church Garden

Saturday Sept 17

### CHILDREN'S SECTION :

Once again we have some weeds awaiting a child to search and destroy!

Can you find them? HINT – they are fairly close to each other AND not far from the last time we challenged you to find one.

### REMINDER –

Beach United gardeners include both members of the of the church, and others in the community. All are welcome to join in – no expertise required – just come for a good dig and camaraderie!

Saturday mornings 9:00 – 10:00
