

MORE COLOURFUL PICTURES and A BOTANICAL EXPERIMENT

Saturday August 27

The garden continues to provide church members and passers-by with its bright colourful bank of flowers – on the left, the border along Wineva Avenue outside the office:

And fore people parking their cars there too! The picture above right shows the border along the south wall of the parking lot where recently planted hosta has its first flowering in its new location.

And the veggie garden in the raised beds outside the kitchen too. On the left (below) Okra with bright red stalks and fruit. And the picture on the right shows the tobacco plant with its splendid flowers right at the top.

MORE COLOURFUL PICTURES and A BOTANICAL EXPERIMENT

Saturday August 27

Especially good news is that the Hop tree is thriving following its move from outside the stair well window to the border along Wineva Avenue. The Hop tree is a native Ontario plant donated by Sally Evans but had been having some difficulties in its original location being overgrown by more vigorous shrubs.

A BOTANICAL EXPERIMENT : Last Saturday's gardening was followed by an invitation to coffee at Irene and Hastings' house, with cookies and buns contributed by Britta and Lynne.

The picture below shows a botanical experiment in progress :

Matt explained that, If the acorn sinks, then it is one that might germinate and could become another giant oak tree to join the others in the Beach area.

But if it floats – no good!

FLOATER

SINKER
